

NOAA Teachers in the Field Rhonda Feher and Josephina Hinojos Daily Logs

Students from Kayenta Intermediate School in Arizona and students from Centro de Estudios Tecnologicos in Mexico will learn about science in an exciting new way this year, through the eyes and perceptions of their own science teachers Rhonda Feher and Josephina Hinojos. Rhonda and Josephina are being sponsored by a partnership between the NOAA Teacher at Sea Program and NOAA's Office of Global Programs.

Rhonda Feher teaches science at Kayenta Intermediate School in Kayenta, Arizona. Her school is close to the four corners area of Arizona, gateway to Monument valley and just to the east of the Grand Canyon. The school is part of the Navajo Reservation. Most of her students are Navajo.

Our second teacher, Josephina Hinojos, teaches high school biology and chemistry at Centro de Estudios Tecnologicos in Sonora, Mexico. Both teachers will travel to Tucson in mid-July and join with the North American Monsoon Experiment (NAME) researchers there. Later they will travel to the other operations center at Mazatlan, Mexico where they will fly aboard the NOAA P-3 aircraft.

Rhonda and Josephina will write daily logs, take digital pictures, interview scientists, and answer email as part of her Teacher in the Field and Teacher at Sea adventure.

Daily Logs will begin soon...
